

Steel Water Pipe... ...Engineered Job Specific

SPFA Certification...

...Engineered Pipe Specific

Steel pipe is engineered for the rigorous requirements of today's complex water utility systems. When engineering and specifying steel pipe, require a quality management program that is designed for the manufacture of steel water pipe. Administered by Lloyd's Register Quality Assurance, Steel Plate Fabricators Association (SPFA) Certification, is a program engineered for the manufacture of the highest quality steel water pipe. The annual on-site audit is based on water industry standards that you as utility owners and engineers know and trust. Therefore, after you have engineered your steel water pipeline, specify SPFA certification, a quality system that has been engineered for your steel water pipe.

For more information on the SPFA Quality Certification Program and a current list of STI/SPFA Members and certified plant manufacturing locations, visit our website at <http://www.spfa.org/Industries/WaterPipe/tabid/94/Default.aspx> or call (847) 438-8265.
