

CleanSite™ Containment tanks contain and store oil and natural gas field production waste. CleanSite™ specifications are adaptable to above-ground or buried applications, and to a variety of tank sizes, shapes and configurations.

CleanSite™ Containment tank in buried application.

## CleanSite™ Containment features

- Low 3-5 foot profile
- Integral secondary protection available
- Open-topped UST or AST, covered with steel grating
- Flanged head for interior floor-to-wall joint
- Internal and external lining for corrosion protection

## CleanSite™ Containment benefits

- Captures potential environmental hazards: chemicals and particulates from oil and natural gas production waste
- Built to nationally-recognized STI standards
- Cylindrical, rectangular or customized designs
- Low-cost customization meets customer-specific needs
- Rigorous third-party quality control inspection with STI labeling program
